AMENDMENTS TO THE SPECIFICATION

*Please replace Paragraph **[0023]** with the following replacement paragraph:*

In the memory card 10, it is contemplated that the body 34 will be formed to include a generally planar sloped surface 44 which extends angularly between the bottom surface 38 and the lateral side 42 to which the distal ends of the chamfer portions 28 of the contacts 16 extend. In this regard, the outer surface 32 of the chamfer ~~potion~~ **portion** 28 of each of the contacts 16 is preferably substantially flush with the sloped surface 44 of the body 34. Thus, the outer surfaces 32 of the chamfer portions 28 of the contacts 16 and sloped surface 44 of the body 34 collectively create an external chamfer on the leading edge of the memory card 10 which ensures metal-to-metal contact between the exposed surfaces of the contacts 16 and the connector pins of the host socket connector. In this regard, such chamfer on the leading edge of the memory card 10 allows the connector pins of the host socket to hit only metal, as opposed to the abrasive, fully-molded body 34 of the memory card 10.
